Date_____

Dear Ohio Legislator:

Influenza vaccination is an invasive medical procedure with inherent, significant risks including death. Additionally, influenza vaccination has questionable effectiveness for many vaccinated individuals and offers little to no protection to others. The National Childhood Vaccine Injury Act of 1986 shields vaccine manufacturers and those who administer vaccines from vaccine injury liability. Citizens cannot sue if they are injured from a vaccine, even if there has been a death resulting from a vaccine.

Employers should not have privilege that extends into employees' bodies and subverts employees' freedom to make personal medical choices. Mandatory influenza vaccination violates the principles of informed consent, personal liberty, and religious freedom defined in the Geneva Convention, the United States Constitution, the Civil Rights Act, the American Medical Association's Code of Medical Ethics, the Universal Declaration on Bioethics and Human Rights, and Ohio Revised Code 2317.54 Informed consent to surgical or medical procedures or course of procedures.

Therefore, as a citizen of Ohio, I request that our state legislators and the Governor pass **Ohio House Bill 193**. This bill would prohibit employers from firing current employees or not hiring prospective employees who decline influenza vaccines. This bill will provide all Ohio citizens the right to medical informed consent, a basic tenet of ethical medical practice. On behalf of all Ohio citizens, I thank you for your support.

Sincerely,
